

Information received from Maldon U3A Wild Flower and Tree Identification

I am a member of Maldon U3A and for many years now have been running successful groups lasting for 8 – 10 months each either on Wild Flower Identification or Tree Identification. Dozens of Maldon members have passed through these groups, which involve mainly being outside in the field with our books and notepads, and if the weather is not suitable for that, staying indoors but still working. This year I am opening up to other U3As in the area. The choice of those Maldon members who have expressed interest is to do Trees this year. I am open to either depending on the numbers that wish to do it. I usually operate on a fortnightly Tuesday morning session, but this could change if the group as a whole would prefer it. I live in Danbury and we often use my house as a base. Danbury is surrounded by extensive woodland.
